Introduction

This document presents a list of valid ichthyosauromorph species. It is a constant work in progress given the pace at which new ichthyosaur research happens. Perhaps not as rapidly as some other fossil groups, but certainly fast enough to require some attention. It's also intended to give some handle on the vast literature available for ichthyosaurs and their near relatives by means of synonymy lists. I've chosen this format for it's familiarity, but also because I rather enjoy the process and trials to building a complete yet usable synonymy list.

I've used this also as an exercise in typography – like much of my more public output. This document is typeset in LuaFTEX using typefaces with various nice features – old style figures, small capitals, optical sizes. The fonts used are nonetheless open source, courtesy of their development at Adobe.

Layout of synonymy lists

The synonymy lists are presented as unruled tables:

If a work names a new species or combination, the LSID of the act is included as a link button alongside the taxon name, where this is available. Similarly all works that have publication LSIDs have those included too.

1 i.e. LSID

'Richter symbols' & certainty of assignment

I've followed the recommendations of Matthews (1973), pretty much to the letter, for the symbols and styles included in the leftmost two columns.

- *In front of the year* * (asterisk) this publication marks the name becoming valid under ICZN rules.
- . (dot/period) we accept responsibility for attaching this reference to the taxon in question.
- (no sign) we cannot responsibly attach this reference, but do not doubt it.
- ? (question mark) there is some doubt in attaching this reference to the current taxon.
- *v vidimus*, we have checked the deposited specimens. Can be accompanied by the above tokens:
 - v^* we have seen the type specimen(s).
 - v. we take responsibility for attaching the deposited specimens.
 - ν we do not take responsibility for attaching the deposited specimens.
 - *v?* the specimens cannot be certainly assigned to this taxon.
- (?) the year of publication is uncertain.
- *p* only part of the deposited specimens can be assigned to the current taxon.
 - *vp* the deposited specimens have been checked and only part of them belong to this taxon.
- And by formatting the year 1881 (italicised) this work does not add morphological information, only occurrence information.
- 1881 (upright) the work adds to our knowledge on this taxon.
- (1881) (parentheses surrounding the year) the date of this work is uncertain.

Life Science Identifiers (LSID)

Life science identifiers² are unique keys to identify and locate information important to the various life sciences. Relevant to this document are the identifiers used to link nomenclatural acts in *ZooBank*,³ the official registry of the International Commission on Zoological Nomenclature (ICZN). Naming new taxa in the recent literature requires registering the act in ZooBank to be 'officially' recognised.⁴

Many of the taxa included herein were named before ZooBank was yet a glint in anyone's eye, although they may well have been included in the printed equivalent *Zoological Record*. I've registered several new publications and acts where these were not in ZooBank before, that may be used henceforth. At the moment, these include only the original naming of species, not new combinations of specific and generic names.

Links in this document

The Lagrange to provide links within the document⁵ and to other references on the web. These have different colours, as follows:

```
2https://en.wikipedia.org/wiki/LSID
```

3http://zoobank.org

```
4 https://www.iczn.org/the-code/
the-international-code-of-zoological-nomenclat
the-code-online/(Article 8.5.3);https:
//en.wikipedia.org/wiki/ZooBank
```

5 e.g. citations and sections

6 e.g. LSIDS and DOIS

Introduction 2

Citation links from the year of a citation to its reference in the bibliography.

 $\mathit{URL}\,$ often web links, particularly to websites, DOI links, LSID with the address fully written.

Ink to a ZooBank LSID for an act.

List of Species

Acamptonectes densus 5	Ichthyosaurus breviceps 8	Protoichthyosaurus prostaxalis 10
